

Mishal Adel Al Munayes

From understanding a problem to taking a practical step.

I offer advisory and technical support to government leaders and institutions, bringing together data analysis, an understanding of operational processes and solution design. My aim is to contribute to Kuwait through work grounded in evidence and evaluated in practice.

All consultations for government institutions are entirely free.

Areas of contribution

- 01 Data science, executive reporting and decision support.
- 02 Software and technical tools shaped around operational needs.
- 03 Digital transformation, process review and automation priorities.
- 04 Needs analysis, resource allocation and operational efficiency.
- 05 Security technology, data protection and access requirements.

How I work

01	02	03	04
Understand	Prioritise	Test	Evaluate
Review the problem and evidence with the people doing the work.	Verify causes and compare options and their requirements.	Start within a defined scope before expanding.	Measure what changes and adjust the approach.

Outputs depend on the need: a diagnostic brief, executive report, options comparison, process map or technical prototype.

Discuss your institution's needs

Start with a short description of the challenge, followed by a conversation about scope and the next step.
